TODAY IN AI

- Circular financing deepens as chipmakers invest in AI startups
- Multimodal decision APIs aim to cut costs and latency
- Celllevel genomics models boost diseasevariant research

TOP STORIES

1. Taiwan's chipmaking giant TSMC to invest $1B in Anthropic, OpenAI

Ars Technica AI | Business | importance 8/10 | 11 Nov

TSMC will invest $1 billion - $500 m in OpenAI preferred stock and $500 m in Anthropic shares - linking its chip production to AI developers amid record profits and concerns over circular financing.

2. Gemini Decisions API: Fast, calibrated multimodal decisions

Google AI Blog | Models | importance 7/10 | 11 Nov

Google launches Gemini Decisions API, using Gemini Decision 1 to score up to 1,000 multimodal yes/no or multiplechoice queries in a single pass, offering subsecond latency and lower cost per token.

3. AlphaGenome 2: Deciphering how cells read DNA to better understand disease

Google DeepMind | Research | importance 7/10 | 11 Nov

DeepMind releases AlphaGenome 2, a conditional model predicting DNA variant effects for specific cell types and states, trained on 100 M singlecell profiles, doubling variant detection versus its predecessor.

4. Google's AlphaGenome 2 zooms in on the cellular roots of disease

The Verge AI | Research | importance 7/10 | 11 Nov

The Verge reports AlphaGenome 2 provides finergrained predictions of genetic variant impacts across cell types, aiding disease research and drug targeting by turning static cell atlases into a predictive genetics engine.

5. JioStar's chief architect on AI discovery at 500M-user scale

OpenAI | Business | importance 7/10 | 11 Nov

JioStar's chief architect Vijay Seshadri shares lessons on scaling AI evaluation, guardrails, and production deployment for a user base of 500 million.

6. PSI is trying to make a business out of AI-driven scientific discovery

TechCrunch AI | Research | importance 7/10 | 10 Nov

Startup PSI uses Anthropic's Fable 5.2 to solve the AaronsonAmbainis conjecture, showcasing AIdriven scientific discovery and aiming to commercialize breakthroughs in quantum computing and other physics domains.
