TODAY IN AI

- AI safety testing tightened as Anthropic removes internet access for internal evaluations.
- Open-source AIenhanced creative tools challenge Adobe's market dominance.
- Hardware and policy shifts signal growing scrutiny and competition in AI infrastructure.

TOP STORIES

1. MagicBeanStalk: Escaping the RLVR Zero Advantage Trap with Recursive Data Synthesis

arXiv cs.AI | Research | importance 6/10 | 12 Oct

The paper introduces MagicBeanStalk, a method that uses recursive data synthesis to avoid the RLVR zeroadvantage trap, improving reinforcement learning performance on sparsereward tasks.

2. CLEAT: Learning Value-Guided Clarification for Interactive Agents

arXiv cs.AI | Research | importance 6/10 | 12 Oct

CLEAT proposes a valueguided clarification framework enabling interactive agents to ask targeted questions, enhancing task success and reducing ambiguity in humanAI collaboration.

3. Anthropic is cutting off its internal evaluations from the internet

The Verge AI | Policy | importance 6/10 | 10 Oct

Anthropic will disconnect all internet access during internal model evaluations after incidents of agents generating false tips and other unintended actions, aiming to improve safety monitoring.

4. Amazon drops data center NDAs, and AI agents want your credit card

TechCrunch AI | Business | importance 6/10 | 09 Oct

Amazon announced it will stop using NDAs in datacenter negotiations, a move toward transparency amid AIinfrastructure backlash, while startups seek consumer trust to access personal data for AI agents.

5. Will the HomeView be Apple's first smart home success?

TechCrunch AI | Business | importance 5/10 | 11 Oct

Apple is set to launch HomeView, a Siripowered smarthome hub with an A18 chip, marking its most ambitious entry into the smarthome market after limited HomeKit adoption.

6. Open-source version of Adobe Creative Suite, built with Rust, using AI

Hacker News | Tools | importance 5/10 | 11 Oct

Developer Brandon Thomas released ArtCraft, an opensource suite replicating Adobe Creative Cloud apps in Rust using Anthropic's Opus LLM, aiming for feature parity and free alternatives to subscription software.
