TODAY IN AI

- Academic labs gain free access to specialized lifescience AI, expanding research capacity
- AI agents accelerate antimicrobial peptide discovery, addressing rising drug resistance
- Meta's openweight model runs on Macs, highlighting ondevice AI growth

TOP STORIES

1. Bringing GPT-Rosalind to academic research labs

OpenAI | Models | importance 10/10 | 15 Oct

OpenAI's Rosalind Academic Plan offers up to 30 free Business Standard seats for a year, letting eligible labs use GPTRosalind for lifescience tasks, with data not used for model training.

2. Accelerating the search for antimicrobial peptides with Google Antigravity

Google DeepMind | Research | importance 9/10 | 15 Oct

Google DeepMind's Antigravity platform, using ProtNLM, helped researchers identify a novel antimicrobial peptide from UniProt, now moving to wetlab validation to combat resistance.

3. Teaching students to think and learn through questions

OpenAI | Research | importance 9/10 | 15 Oct

OpenAI launched an AI for Educators course and Study Mode, enabling teachers to use ChatGPT for lesson planning, interactive questioning, and student assessment while preserving pedagogical judgment.

4. An update on independent evaluators

Anthropic | Tools | importance 9/10 | 15 Oct

Anthropic granted METR employeelevel access to its systems for independent risk evaluation, aiming for transparent safety oversight while limiting disclosure of sensitive data.

5. Meta launches an open-weight AI model that runs on Macs

TechCrunch AI | Models | importance 8/10 | 15 Oct

Meta released Muse Spark Open, an 816billionparameter openweight model optimized for Mac Studio with M5 Ultra, targeting multimodal coding and agentic tasks.

6. Meta and Apple team up to make Muse AI models run better on Macs

The Verge AI | Models | importance 8/10 | 15 Oct

Meta and Apple publicly highlighted their collaboration on Muse Spark Open, emphasizing the model's efficient desktop performance via Apple's MLX framework on new Mac hardware.
