AI NEWS DIGEST

Tuesday, 13 October 2026

48 articles scanned | 8 sources | top 6 stories summarised by AI

TODAY IN AI

- Meta launches frontier models aiming for personal superintelligence
- Microsoft unveils efficient AI chip to reduce GPU dependence
- OpenAI's new FFT research seeks theoretical speed limits

TOP STORIES

1. Meta releases its first frontier model, Muse Wonder

TechCrunch AI | Models | importance 9/10 | 12 Oct

Meta's Superintelligence Lab released Muse Wonder and Wonder Full, larger frontier models with higher benchmark scores and activememory features, priced similarly to top competitors and intended to power its Muse agent.

2. AI Models Can Provably Hide Arbitrary Capabilities

Hacker News | Research | importance 8/10 | 13 Oct

arXivLabs is a framework that allows collaborators to develop and share new arXiv features directly on our website. Both individuals and organizations that work with arXivLabs have embraced and accepted our values of openness, community, excellence, and user data privacy.

3. Muse Wonder Puts Meta Back at the AI Frontier

Wired AI | Models | importance 8/10 | 12 Oct

Meta's Muse Wonder models claim toptier performance, surpassing Anthropic's Claude Fable 5.1 and approaching GPT6 Astra, featuring Active Memory and Focus to improve agent reliability.

4. Meta has some Wonder Full new AI models

The Verge AI | Models | importance 8/10 | 12 Oct

Meta announced Muse Wonder and Wonder Full, accessible via API and Muse Code, positioning them against leading models from OpenAI and Anthropic while expanding its AI agent ecosystem.

5. Microsoft's new AI chip makes it less reliant on Nvidia's GPUs

The Verge AI | Models | importance 8/10 | 12 Oct

Microsoft introduced the thirdgeneration Maia 300 AI chip, promising 40% higher tokenpermegawatt efficiency and up to 7× rackscale throughput, aiming for primary inference use by 2027.

6. A look at OpenAI's math that's claimed computes faster Fourier transforms

Hacker News | Research | importance 7/10 | 13 Oct

OpenAI's math repository presents research on reducing the constant factor in FFT algorithms, exploring theoretical limits to accelerate Fourier transforms beyond the classic 5·n·log n bound.
