TODAY IN AI

- Agentic AI usage expands in EU enterprises but remains uneven across countries
- OpenAI faces multistate lawsuits alleging unsafe ChatGPT for minors
- Researchers demonstrate AIdesigned proteases that can target diseaserelated proteins

TOP STORIES

1. How Third Moment Research runs 10,000 agents for 36+ hours

OpenAI | Models | importance 10/10 | 14 Oct

Third Moment Research uses OpenAI's GPT6 models and Codex to run 10,000 agents for up to 48 hours, autogenerating synthetic scenarios to improve agent performance, notably cutting quantitativefinance backtesting from hours to minutes.

2. The EU's next chapter in AI is agentic

OpenAI | Policy | importance 9/10 | 14 Oct

OpenAI's EU report shows agentic tools like Codex and ChatGPT Work now generate over half of enterprise token output, with adoption varying widely between countries and firms lagging global frontiers.

3. Eight states sue OpenAI, saying ChatGPT isn't safe for kids

The Verge AI | Policy | importance 8/10 | 14 Oct

Eight US states sued OpenAI, claiming ChatGPT is marketed as safe for youth despite alleged harms, insufficient age protections, and data collection from minors, seeking penalties and data deletion.

4. Researchers use AI to design proteins that cut up other proteins

Ars Technica AI | Research | importance 8/10 | 14 Oct

Scientists used AI proteindesign tools to create novel proteases by swapping catalytic cores, enabling enzymes that precisely cleave diseaselinked proteins, demonstrating AI's potential in therapeutic enzyme engineering.

5. How Tamnoon built AI-powered cloud security remediation with Amazon Bedrock

AWS ML Blog | Tools | importance 8/10 | 14 Oct

Tamnoon built Tami, an agentic remediation system on Amazon Bedrock that autonomously investigates, prioritizes, and safely fixes cloud security findings, reducing critical exposures by over 90 % in three months.

6. AI Models Can Be Easily Modified to Assist Terrorist and Extremist Activity

Wired AI | Policy | importance 8/10 | 14 Oct

Abliterated versions of Alibaba's openweight Qwen model were quickly repurposed for extremist chatbots, highlighting how easy removal of guardrails lets malicious actors adapt AI for terrorist content.
