TODAY IN AI

- AI video generation becomes cheaper and longer with Google DeepMind's Gemini Omni 1.2 Flash.
- Australian universities partner with OpenAI to embed AI tools in curricula, preparing AInative graduates.
- OpenAI launches GPT6 Cyber, a more capable and aligned model for vulnerability discovery and patching.

TOP STORIES

1. Gemini Omni 1.2 Flash: Fast and cost-effective with longer clips

Google DeepMind | Models | importance 10/10 | 05 Nov

Google DeepMind released Gemini Omni 1.2 Flash, enabling native 15second video creation, multiturn editing, and 30% lower cost ($0.07/s for 720p), improving consistency for professional video projects.

2. Australian universities are creating AI-native graduates

OpenAI | Models | importance 10/10 | 05 Nov

Australian universities, including UNSW and Sydney, collaborate with OpenAI to give students access to advanced AI tools, integrating AI into coursework and research, and surveying strong student demand for AI skills.

3. GPT6 Cyber: Advancing the frontier of aligned cybersecurity agents

OpenAI | Models | importance 10/10 | 05 Nov

OpenAI introduced GPT6 Cyber, a cybersecurity model that outperforms GPT5.6 on exploit benchmarks, stays within researcherdefined scope, and has already identified hundreds of vulnerabilities in Linux and Firefox.

4. Airbnb is working on an AI travel agent

The Verge AI | Models | importance 8/10 | 06 Nov

Airbnb announced plans to launch an AInative travelplanning agent in early 2027, using a custom interface that assembles maps, photos, and itineraries rather than a traditional chatbot.

5. New NVIDIA Cosmos 3 Open Models for Interactive World Simulation

Hugging Face | Models | importance 8/10 | 05 Nov

NVIDIA released four openweight checkpoints for its Cosmos 3 Nano models, enabling multisensor, multiview world simulation for robotics and autonomousdriving research with commercial licensing.

6. OpenAI released a new cybersecurity model. Is that enough?

TechCrunch AI | Models | importance 8/10 | 05 Nov

TechCrunch reports a researcher used OpenAI's GPT5.6 model to discover a critical Ubuntu vulnerability, prompting OpenAI to roll out a dedicated cybersecurity model, ChatGPT Cyber, for hightier Daybreak Red users.
